LEAKS CAN BE STOPPED

A 2015 Study by the Virginia Mason Medical Center found:

- 💧 Approximately 6,600 individuals are estimated to sustain long-term cognitive sequela annually, with total loss in earnings of approximately \$925 million;
- 💧 334 individuals die from accidental, non-fire related CO poisoning with an average loss of 26 years of productivity accounting for \$355 million;
- 💧 2,800 are hospitalized with acute medical care costs of \$33 million;
- 💧 Accidental CO poisoning in the US conservatively costs society over \$1.3 billion, resulting from direct hospital costs and lost earnings.

Non-Fire Carbon Monoxide Incidents by Year 2003-2010

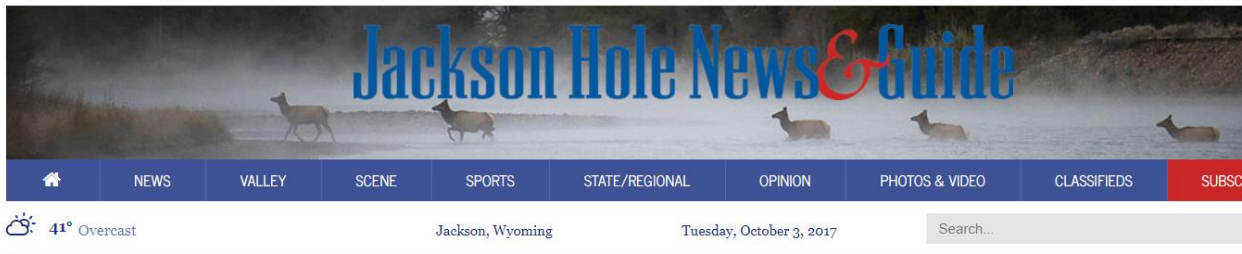

UPDATED: Casper woman awarded \$28.2M in carbon monoxide poisoning case

By LAURA HANCOCK Star-Tribune staff writer Dec 27, 2013 12

Questions linger in Colter fire fatality

By Mike Koshmrl Aug 5, 2015 0

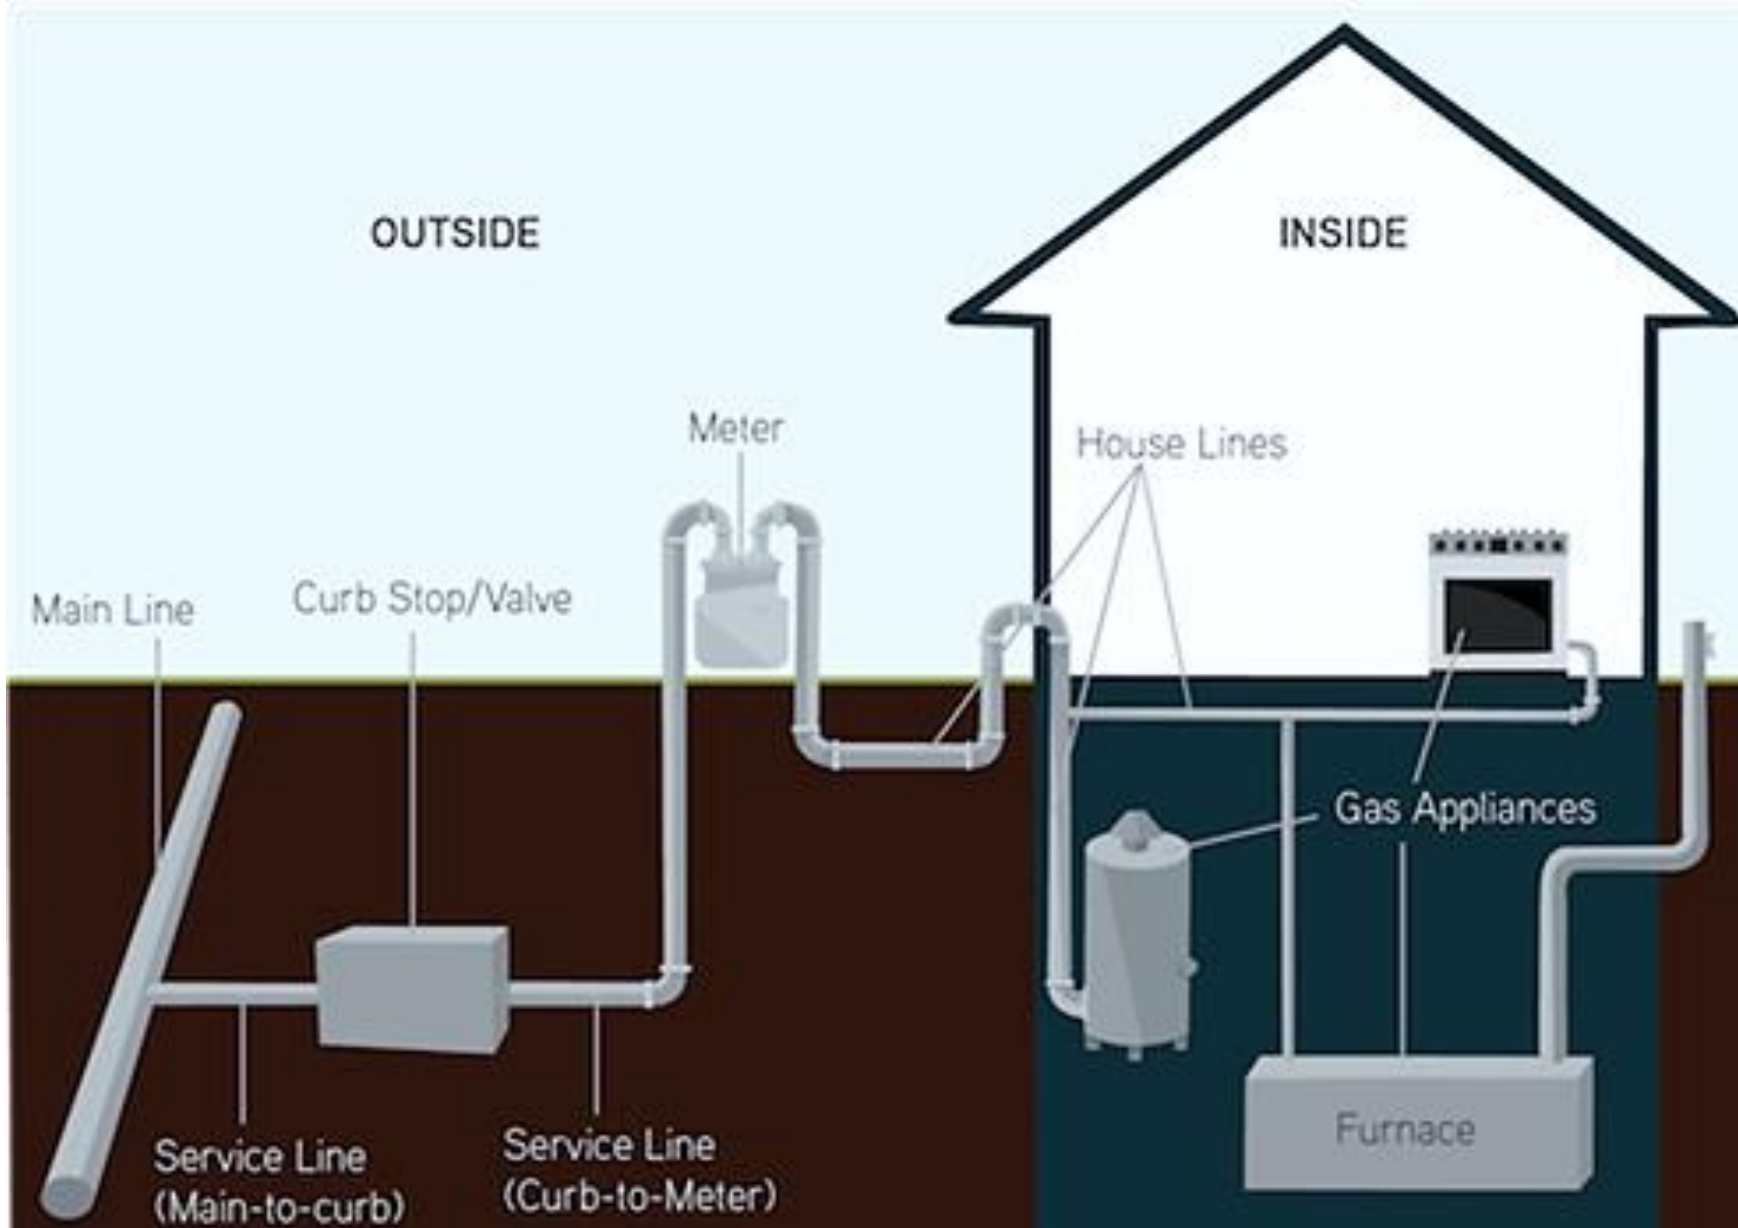

“What it means is that landlords actually have to live up to their responsibilities to provide a safe place for tenants, not just a soft promise in Wyoming, and landlords will be held accountable if they refuse to do that,” [Logan] said.

Domestic Gas Leaks

- 💧 Incidents involving natural gas pipelines still cause an average of 17 fatalities and \$133 M in property damage annually.
- 💧 In 2014, the National Fire Protection Agency reported that fire departments responded to over 3,200 gas-related residency fires, 2,000 of which were linked to natural gas
- 💧 Many gas accidents involve utilities and the culprits are often homeowners or construction workers damaging or cutting lines.
- 💧 54% of the time ordinary citizens were hurt, while 31% of cases involved employees at companies working with the gas and 12% involved firefighters.

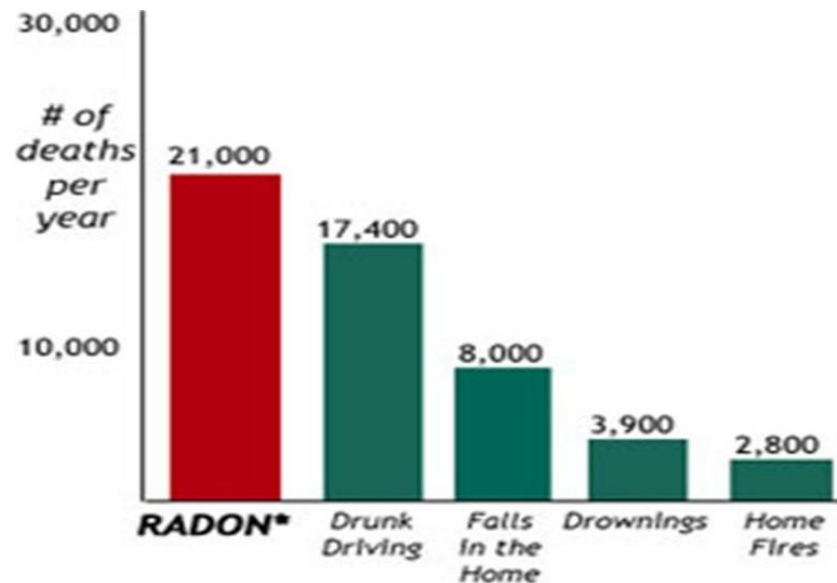

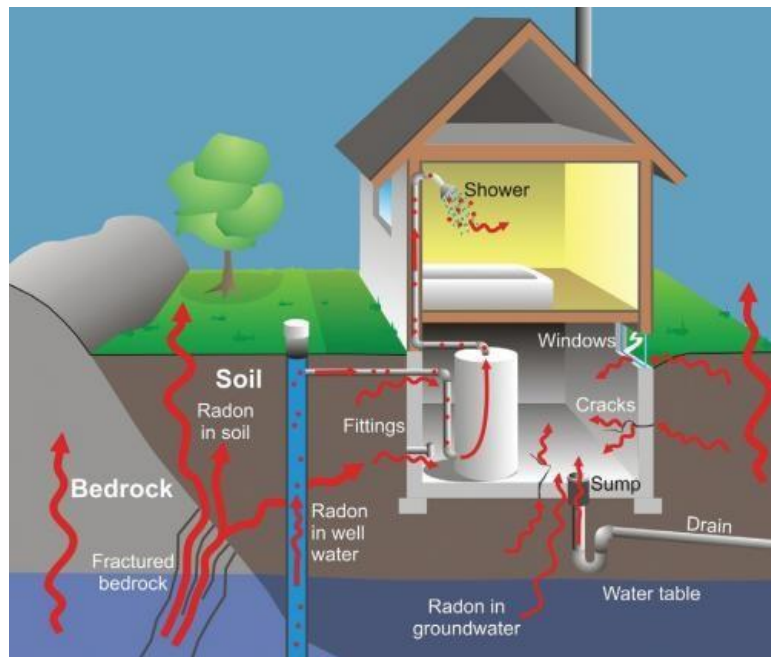

- 💧 Most often, gas leaks come from badly maintained or poorly fitted appliances, 15 million of which were recalled in the past decade.

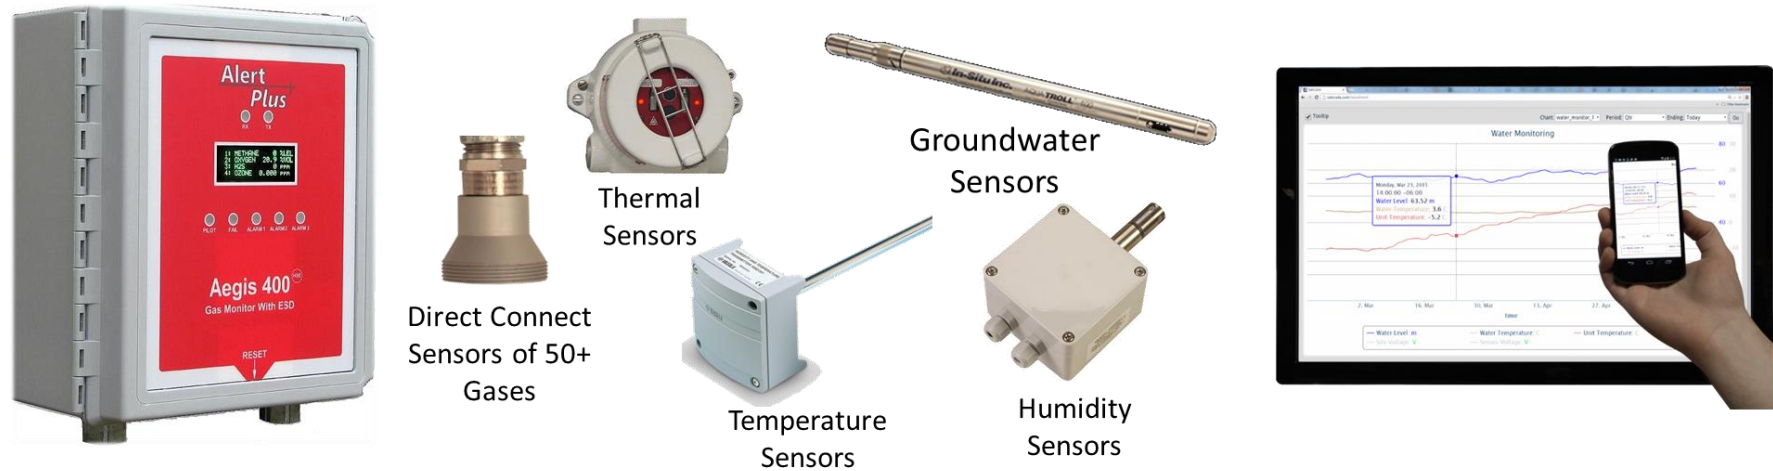

The EPA shows clear link between lung cancer and Radon

- 💧 It's the single largest contributor to an individual's background radiation dose.
- 💧 It can accumulate in confined areas such as attics and basements.
- 💧 EPA evidence shows a clear link between lung cancer and high concentrations of radon, with 21,000 radon-induced U.S. lung cancer deaths per year—second only to cigarette smoking.

The Aegis System consolidates multiple gas and non-gas sensors into one monitoring system.

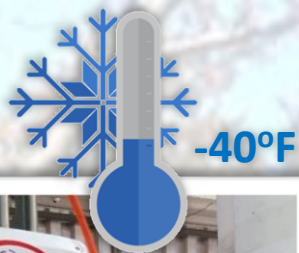

CONSOLIDATION OF MULTIPLE SENSORS

- 💧 Integrates into existing smart home networks
- 💧 Security for your home's utilities, appliances & atmosphere
- 💧 User friendly and easy access
- 💧 Patented shut-off valve may quickly respond to danger preventing disaster and harm
- 💧 Industrial technology for the family home

Sensors available for propane, natural gas, radon, carbon monoxide, water, etc.

The Aegis shields your home or business

- 💧 Four distinct channels to monitor multiple locations at once.
- 💧 Guard against carbon monoxide and gas leaks
- 💧 Increased monitoring can lower your insurance premiums
- 💧 24/7 protection for you and your family
- 💧 Helps you avoid claims whose loss would run for 3 years
